Not Your Average Air Purifier

FreshAir with ActivePure uses natural processes found in thunderstorms, sunlight and lightning to clean indoor air and safely reduce contaminants on surfaces. The U.S. EPA has stated that indoor air quality can be up to five times more polluted than outdoor air. Dust, dust mites, harmful pollutants, pollen and odors are all sources of indoor contaminants. There are potential negative repercussions including fatigue, sneezing and coughing while more long-term manifestations of poor IAQ can lead to more serious challenges.

Benefits of FreshAir:

- *Removes airborne contaminants for a healthier environment.*
- *Freshens air and removes odors in otherwise stale-prone environments.*
- *Removes dirt and dust from the air to make cleaning easier.*

Vollara's Uncompromising Health™ Technologies

Take control of your IAQ with an indoor air purification system so superior it leverages Space Certified Technology™. FreshAir technology has been tested and validated in major university studies conducted for Vollara at Kansas State University and the University of Cincinnati, and is key to transforming indoor settings from homes to office buildings, to churches, hospitals and schools. Even the Pentagon relied on multiple FreshAir systems to combat the challenges of removing air contaminants in the aftermath of 9/11.
